

**CASE
STUDY**

Client	Miller Homes/Taylor Woodrow (Now Bryant Homes)	
Project date	On going	Case Study date April 09
Area	7.5 ha	Budget

**Project: Housing development, Hampstead
Norreys Road, Hermitage, UK**

Services provided

Site Investigation, design all access roads and drainage and foundations.

Description of project

The site, approx 7.5 ha, was previously a depot used for the storage of engineering equipment and plant.

The development comprised residential units with both private and communal gardens.

Merebrook was commissioned to carry out site investigations following the demolition of the existing buildings and then to design the road alignments and sustainable drainage for adoption.

The drainage relied on soakaway drainage and attenuation for the S104/S38 infrastructure agreement.

They were also commissioned to carry out the foundations and superstructure design. There was an extensive use of raft foundations designed to cope with potential large solution features.
